

# Passwordless Authentication

Effortless passwordless authentication delivering phishing-resistant MFA that is easy for users

## TRUSTED BY COMPANIES LIKE:

As a result of the rise of cloud applications, hybrid work, and MFA bypass attacks, modern companies are contending with a threat surface that passwords and weak MFA cannot secure.

Beyond Identity eliminates credential vulnerability by eliminating the password and all phishable factors. Instead, you can secure your data with phishing-resistant MFA that delivers cryptographic assurances of user identity and device.

Users don't have to use a second device to login. Help desks don't have to reset passwords. Attackers don't have any phishable credentials to target.

### Unique Benefits:

- ✓ Single-device frictionless MFA with no one-time codes, push notification, or magic links
- ✓ Phishing-resistant MFA with dynamic risk-based access policies
- ✓ Simple to deploy, maintain, and audit for identity and security teams
- ✓ Supports and accelerates zero trust strategy

## USE CASES

### Eliminate login friction

Enable productivity with a login experience that delights. No one-time codes, push notifications, or password resets ever again.

### Secure extended workforce and BYOD

Gain strong assurance of user identity and control access using real-time security posture from all endpoints in your fleet.

### Prevent breaches

Make password-based attacks obsolete and leveraging phishing-resistant factors that exceed government mandates.

### Lower operational costs

Eliminate help desk calls for password issues. Rapid time-to-value with a FIDO2 certified platform supporting all major SSOs, identity protocols, and devices.
